

# ECM Power Checker

by Zebra Instruments

Quickly Tests Incoming Line/Harness Power  
for ECM Motors by G.E. and Regal-Beloit

For ECM Motors

## Uses Easy-to-Understand LED Indicator Lights To Test & Indicate:

- Input Power Levels (120/240VAC)
- Power Filter/Choke Pass Through
- Are the Wiring Configurations and Power Jumper Wires set correctly?

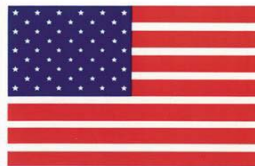

Whenever replacing a motor or changing wiring, plug the ECM Power Checker onto the Motor's Power Harness **BEFORE** plugging the harness into the motor. The LED's on the Checker alert you to conditions that can **instantly** damage the motor, so you can correct them **before applying power to the motor's module**. Full instructions inside package; quick reference chart is printed on the rear side of the tool.
